Edit Comments Share Naruto Shippūden: Ultimate Ninja Impact is the sixth overall Naruto instalment of the PlayStation Portable. It was released in North America on 19 October 2011, in Japan on 20 October 2011 and on 21 October 2011 in Europe. Known Problems[edit | edit source] Data Installation(Minor): Whenever you try to install the game data, 400MB worth, the emulator will freeze. This is a minor problem as you can simply avoid this installation by saying 'No' to the pop-up message. Flickering Black Screen: The screen will flicker a black-shaded screen every frame if Rendering Mode is set to Non-Buffered Rendering. Performance Loss: When you are playing the game, during actual gameplay, if your screen is filled with enemies, you will experience a slowdown, it is a tremendous slowdown, although with the settings below, I have managed to minorize it. PC Configuration[edit | edit source] Disclaimer: The settings below are for a mix between performance and accuracy. If a setting is not mentioned, it presumably doesn't affect the game in any way; feel free to experiment. Graphics: Rendering Mode: No particular settings. Framerate Control: No particular settings.
