After connecting PDP Controller to PC says its notare running windows 10 with all the updates installed. after installing the drivers from the pdp site it doesn't even work. after trying to manually install drivers through the device manager, it shows only a yellow exclamation sign next to the wired pdp controller for xbox one - stealth Series|Phantom black. Is there a solution? install driver for original xbox one does not work. in the device manager says the device can not start. Code 10 0 you enabled bluetooth on your pc or are you oando a xbox wireless adapter or an ob cable? 0 I see that I am a wired controller and the only advice I find is updating the microsoft drivers that you seem to have done. He'll see what else I can play for you. 0 update of windows 10 should have an option for installing drivers. I'm not sure if the drivers from the device's site is for all windows 10 buildings. 0 Have you tried to download the pdp hub from the microsoft store (free) on your pc? 0 I'm oando ob. I installed the pdp hub, but I can't do anything because it says: connect the pdp controller and as I said it isnt detected. 0 I had this exact problem. And I just fixed it. (win 10, pdp controller, wired, stealth series, pdp hub, does not recognize) my controller was not recognized by windows at all. I downloaded the appropriate drivers from the pdp site and showed up in my device manager as "pdp [...]" after rebooting, my controller vibrated and lit on the power. after installing the pdp hub, my controller was recognized. I uninstalled the device (right by clicking on it in device management) and physically disconnected / reconnected the controller - hoping the windows will find the drivers for me. windows found the drivers and now it was listed in device management under "xbox peripherals" as "xbox gaming device" (and it is still.) the pdp hub software then recognized the controller (I pressed a) and asked that the drivers are up-to-date (atuo-update through the hub.) reported to the first screen (controller connection) and I dated a bit because it did not show any recognized controllers again, but that now I think the key was getting the device installed under the xbox gaming device name. I don't think my exact process is a correct solution, however, that's how I solved my problem. hopefully, it will also help future readers. Last update: 30 September 2019 0 I had this exact problem. And I just fixed it. (win 10, pdp controller, wired, stealth series, pdp hub, does not recognize) my controller was not recognized by windows at all. I downloaded the appropriate drivers from the pdp site and showed up in my device manager as "pdp [...]" after rebooting, my connected controller vibrated and lit on the power. after installing the pdp hub, my controller was not recognized. I uninstalled the device (right by clicking on it in device management) and physically the controller - hoping the windows will find the drivers for me. Windows found the drivers and now was listed in Device Manager under "Xbox Peripherals" as "Xbox Gaming Device" (and it is still). The PDP Hub software then recognized the controller (I pressed "A") and asked for the drivers to be updated (to-update through the Hub). Reported to the first screen (controller connection) and I freaked out a little because it didn't show recognized controllers again, but I clicked the box (which says connecting a recognized device [or any]) and went on to the next screen with my controller now connected. I think the key was getting the device installed under the name Xbox Gaming Device. I don't think my exact process is a correct solution, however, that's how I solved my problem. Hopefully, it will also help future readers. I tried. It worked last night and now when I tried to connect the controller, it doesn't work. She does the same thing she doesn't even turn on.
