How many red 10 cards are in a deck of cards

I had to make cards for a game I'm planning. I needed a lot of them - a total of just under 200! I tried here to see if someone had a method of making these cards easily, but all I found were ways in which you had to destroy or use another deck you bought - I didn't want to do it, so I weighted a little and I invented the following method that creates custom cards without ruining a pre-made deck. These cards are entirely from zero. Here's what you need to do cards like this: 1) a program to draw your custom card set. (I have actually used two different programs each has its own advantages) i oato microsoft word and nandeck (the word is more difficult to place exactly, but you do not need to learn a new programming language. nandeck makes it easy to place things, but he took to learn a new programming language. 2) a good quality color printer (I oated a color laser printer at work) 3) paper to print your cards on. 4) glue sticks (I prefer the 'color stick' variety - it is easy to see if you have a good cover) 5) optionally a clear spray paint to seal cards with. 6) a good paper cutter to cut the cards off from paper after gluing (it is difficult to cut good seam edges with scissors). in this method the cards are made of three layers of paper glued together. this bonding stiffens the three layers and makes them feel like a professionally made card. then begins with a rectangle which is 3 timesAs high as you want the card. In the lower third draw a solid black rectangle, this serves to block any light that otherwise could go through the paper and reveal its value. In the third center draw the image of the back of your cards. If this image has a defined up and down it remembers to place it head down. Then in the third upper part draw the values of the individual cards. The cards I made were 2.125" X 3.125" when finished (so the rectangle in the drawing program was 2.125" X 9.375"). This size will allow three cards for each sheet of paper from 8.5 X 11 inches. Putting at least a small space between the cards makes it easier to cut the cards, if they are touching and you lose the line of little you will make a card too thin and another too wide. What is too wide is not a real problem as it can be re-tried, but the other will always be too tight. I originally made these cards with three separate pieces of paper, but the alignment became a nightmare. Choose which printer you are going to use and print cards. I suggest using a printer that has ink that is not soluble in water. Chewing or other moisture from the hands or glue can cause soluble ink of water to perform or smear. Turn off the part of the paper that is under solid black rectangles. It is ok if you accidentally cut out a small amount of black rectangles (not more than a sixteenth of an inch) as this will make it easier to fold them. I suggest you use a good paper cutter here asHe's gonna make a nice edge straight. I didn't have a cutter the correct size for this so I oated scissors. carefully fold the card to the line between solid black rectangles and the back of your cards. then fold this so that it aligns with the top of the face of your cards. These folds must be made with the printed side of the paper that looks out of you so that the back and front of the cards will end on the outside of the folded card. I found the easiest way to do this was to stay close to my glass patio sliding door, bending the paper on the door. so I could see where to fold the newspaper. More accurately bend the card here the best front cards and the back will be aligned. explain the paper and lay the glue on the back of the solid black part. fold this back into position against the paper shoulders and smooth the air pockets or glue drops. then lay glue on the face of black portions. bend the faces above and smooth as before. to avoid getting glue on the whole table or desktop, it is useful to put a piece of scrap paper under the cards that glue. After the paper was pasted and folded I discovered that it is good to put them between the pages of a large book (I oato a large volume of shakespeare) and let them dry for at least 24 hours. this will help them dry flat. you should possibly put a little further away from the spine, although as I found my cards had a slight curl towards that part of the card when I brought them out. this step is notrequired, but I recommend to seal the cards from moisture soften glue and all your hard work that is canceled. you can use either a light or lacquered acrylic spray paint for this coating process. spray a generous coat on one side, allow it to dry to touch, and then do the same on the other. Moreover, if you use a water soluble ink when printing the cards this coating will prevent sweat and other moisture from ruining your new custom card deck. oando a cut of paper remove excess paper. once this has been completed on all your cards, congratulations now you have a new shiny custom deck of cards! cards! how many red 10 cards are in a deck. how many red cards are in a deck of 52 cards. how many red cards in a deck of cards
