

## **Corrugated steel roofing sheets bristol**

ALL ORDERS ESTIMATED TO BE DELIVERED WITHIN 3-4 WEEKS (T&Cs Apply) ALL ORDERS ESTIMATED TO BE DELIVERED WITHIN 3-4 WEEKS (T&Cs Apply) Since our formation over 30 years ago Coverworld UK Ltd has grown to become one of the country's leading producers and suppliers of single and twin skin coated steel cladding systems. Acknowledged as supplying quality products at highly competitive prices, as a customer focused business we pride ourselves on our day to day service. Find out more... Whilst steel is an incredibly tough material, it is not naturally resistant to rust. We, therefore, use a zinc coating in most of our sheets to prevent water and oxygen from causing corrosion and, therefore, use a zinc coating the lifespan. Many of our metal roofing sheets are available with other coatings, such as granules or polyester. These act as an additional barrier from the elements, combating premature corrosion as well as preventing scratches. Granules do not offer added protection from the weather, but also provide a more rustic appearance and increase sound absorption. Polyester Polyester is typically thought of as a fabric. However, this synthetic polymer can be found in many forms and is resistant to most chemicals. Because of this it can be found on railway lines, household appliances and more. Several of our metal roofing sheets are available with a polyester coating, such as our box profile and corrugated sheets. Once coated with polyester, you can expect these sheets to last between 10 – 15 years with virtually no maintenance. You'll be delighted to hear that polyester coated sheets cost the same as uncoated sheets. Yet you benefit from the additional chemical resistance and choice of colours, such as juniper green and slate blue. Plastisol Plastisol has been used in electrical applications for decades. But this rubberised material now appears on an increasing number of roofing sheets can be purchased with a plastisol coating, such as our box profile and corrugated sheets. When coated, these sheets offer a lifespan between 15 – 25 years without the need for regular maintenance. Polyester coated sheets cost around 25% more than polyester coated sheets. However, you can expect them to last up to 10 years longer and, therefore, provide far greater value for money in the future. Page 2Whilst steel is an incredibly tough material, it is not naturally resistant to rust. We, therefore, use a zinc coating in most of our sheets to prevent water and oxygen from causing corrosion and, therefore, extending the lifespan. Many of our metal roofing sheets are available with other coatings, such as granules or polyester. These act as an additional barrier from the elements, combating premature corrosion as well as preventing scratches. Granules Some of our most popular metal roofing sheets feature a granule coating, such as our tile effect panels. These granules do not offer added protection from the weather, but also provide a more rustic appearance and increase sound absorption. Polyester Polyester is typically thought of as a fabric. However, this synthetic polymer can be found in many forms and is resistant to most chemicals. Because of this it can be found on railway lines, household appliances and more.
