## Hectare convert to bigha

This article includes a list of general references, but it remains largely unverified because it lacks sufficient corresponding inline citations. Please help to improve this article by introducing more precise citations. (November 2012) (Learn how and when to remove this template message)
The bigha (also formerly beegah) is a traditional unit of measurement of area of a land, commonly used in India (including Uttarakhand, Haryana, Himachal Pradesh, Punjab, Madhya Pradesh, Uttar Pradesh, Bihar, Jharkhand, West Bengal, Assam, Gujarat and Rajasthan but not in southern states of India), Bangladesh and Nepal. There is no "standard" size of bigha. The size of a bigha varies considerably from place to place. The size of Bigha is different in different areas.[1] Sources[which?] have given measurements ranging from 1,500 to 6,771 square metres (16,150 to 72,880 sq ft), but in several smaller pockets, it can be as high as 12,400 square metres (133,000 sq ft). Its sub-unit is Biswa (or Bisa) or Katha (or Katta) in many regions. Again there is no "standard" size of biswa or katha. A bigha may have 5 to 200 biswa in different regions. Uses in India
The bigha is a traditional unit of land in several parts of North India. Sale and purchase of land (particularly agricultural land) is still done unofficially in this unit. However, the area is recorded in hectare or square metres in official land records. Bigha varies in size from one part of India to another. Various states and often regions within the same state have different sizes attributed to the bigha. It is usually less than one standard acre (43,560 square feet or 4,047 square metre) but can extend up to 3 acres (1.2 hectare). In Assam, a bigha is 14,400 square feet (1,340 m2), subdivided into 5 katha.[2][3] Each katha consists of 20 Lessa with a Lessa covering 144 square feet (13.4 m2) in area. Hence each katha is 2,880 square feet (268 m2) in area, although this may vary within different regions of Assam. 4 bighas together are further termed as a Pura. In Bihar, different regions have different sizes of bigha. Near the capital, Patna, one bigha is equivalent to 20 katha.[4] 1 Katha equating to 1,361 square feet (126.4 m2). One katha is further subdivided in 20 dhur. Hence each dhur is approximately 68.05 square feet (6.322 m2). One dhur is further subdivided in 20 dhurki, each dhurki being approximately 3.403 square feet (0.3161 m2). 1 decimal in Bihar equals to 435.56 sq feet.[5][6][7] 1 decimal is equal to 1/100 acre. In some of eastern parts of the Bihar including Munger, Bhagalpur and Jamui, one dhur is further subdivided into one square lagga (pole length). One lagga is equivalent to 5.5 hand lengths, with each hand length being 18 inches (460 mm). Therefore, one lagga is 99 inches, or 251.46 cm. In Himachal Pradesh, five bigha is equal to one acre (0.0809 hectare). In Punjab and Haryana, 2 bigha is equal to one acre, each bigha is 4 kanaals, each kanaal is 20 marlas, each marla is 9 square karam, each square karam is 30.25 sq ft (5.5 X 5.5 ft), each karam is 5.5 feet. See measurement of land in Punjab. In central India, bighas were standardized at 3025 yd2(2529.3 m2) or 5/8 acre (0.2529 hectare). In Madhya Pradesh, one Katha = 600 square feet (56 m2). In Rajasthan, One Pucca Bigha = 27,225 sq ft and one Kaccha Bigha is equal to 1,618.7 square metres (17,424 sq ft).[8] In Uttar Pradesh, one bigha can mean different things to people in different districts of the state. In the western districts of the state one bigha is either equal to five biswa (one biswa is 125 square metres (1,350 sq ft) or 6.75 biswa. In the remainder of Uttar Pradesh, 1 bigha is divided into 20 biswas. Each biswa is 125 m2 or 154.32 yd2 (hence one Bigha is 0.25 Hectare (or 2500 m2 or 3086.4 yd2 or 26909 ft2). 6 Biswa =1 Bigha (Kaccha) In Uttar Pradesh East one Bigha equals to 20 Biswa(Pakka) and 10 Biswa(kaccha). This is not use as official but on local scale in field calculation. In Uttar Pradesh (West) the measurements are slightly different: one Bigha=20 20 biswa=60 Decimal=2428.80 m2 In Uttarakhand, 1 Bigha is subdivided into 20 Bissas or 12 Nali. or 632.2981 m2. In West Bengal, the Bigha was standardized under British colonial rule at 1600 yd2 (0.1338 hectare or 0.3306 acre); this is often interpreted as being 1/3 acre (it is precisely 40/121 acre). In metric units, a bigha is hence 1333 m2. However in Maharashtra and Tamil Nadu, Bigha is not in practical measurement unit. Uses in Bangladesh
Bigha is a traditional unit of land in entire Bangladesh, with land purchases still being undertaken in this unit. One bigha is equal to 1,600 square yard as standardized in pre-partition Bengal during the British rule. In other words, 3 bigha are just 60.5 katha/360 sq ft short of 1 acre. Measurements of area in terms of bigha 1 Katha (কাঠা) = 720 sq ft (80 sq yd or 66.89 sq m) 1 Bigha (বিঘা) = 20 katha (কাঠা) (14,400 sq ft or 1,337.8 sq m) 1 Acre (একর) = 3 bigha (বিঘা) 60.5 katha (কাঠা) (4,840 sq yd or 43,560 sq ft or 4,047 sq m) Use in Nepal
A Bigha is a customary unit of measurement in Nepal, equal to about 6,773 square meters. Officially, most measurement of lands use units of either Bigha (in Terai region) or Ropani (Nepali: रोपनी) (in Hilly regions). Metric system (SI unit of square metre) is very seldom used officially in measuring area of land. Measurement of area in terms of bigha 1 Bigha (बिघा)= 20 Katha (काठ) (about 6,772.63 m² or 72900 sq.ft.) 1 Kattha (काठ) = 20 Dhur (धुर) (about 338.63 m² or 3,645 sq.ft.) 1 Dhur (धुर) = 16.93 m² or 182.25 sq.ft. 1 Kanwa (कनवा) = 1/16 Dhur (धुर) 1 Kanaee (कान्छे) = 1/16 Kanwa (कनवा) [Kanwa is largely obsolete and is used only when tiny lands are very precious] 1 Bigha = 13.31 Ropani (रोपनी) 1 Ropani = 16 aana (आना) (about 508.72 m² or 5476 sq. ft.) 1 aana = 4 paisa (पाइसा) (about 31.80 m² or 342.25 sq.ft.) 1 paisa = 4 daam (दाम) (7.95 m²) 1 Bigha = 6,772.63 m² For the different Ropani system from the one above 1 Bigha =. 677263 hectare = 1.6735 acre = 13.31 Ropani 1 Hectare = 19.6565 Ropani 19.6565 Ropani = 1 Hectare 1 Ropani = 508.83771 m² Use in Fiji
In Fiji Hindi 1 bigha is equal to 1 acre In popular culture
The classic Hindi movie Do Bigha Zamin by Bimal Roy in year 1953 portrayed the struggle of a poor peasant with very little landholding. See also Doab Jagir Khadir and Bangar Barani, Nahri, Chahi, Taal Banjar, Jungle, Abadi, Shamlat, Gair Mumkin

Bigha at Sizes.com Retrieved from " Hectare, a commonly used unit of the metric system that is used to measure land and plots all across the world, goes by the symbol ha. Invented in the year 1795, the term hectare is a conjunction of the Latin words area and hect.A hectare is equal to 10,000 square meters and 2.471 acres in the British Imperial System. A 100 ha is equal to one square kilometre. Consequently, a farm with 200 ha of fields has 2 square kilometers of fields. To give the understanding of the area a visual perspective, it would be better to equate a hectare with a football field. It is about the size of a European football field.1 Ha2.47 acres1 Ha10,000 square meters1 Ha107. 639 sqft1 Ha11,959 square yards1 Ha100 aresA metric unit of square measure, the term hectare is derived by adding the standard metric prefixes to the original base unit of area, the are. An are is equal to 100 square metres while a hectares is equal to 100 ares. Even though the are is the primary metric unit of land measurement, the hectare has become more common. Also note here that while acre is also widely used to measure land across the world, the hectare and the acre are different in the sense that the acre is a unit of area and hectare is a metric unit of area.Counted among the most commonly used land measurement units by the farming communities across countries, both these units are used to measure large areas of land.A metric unit of area equal to a square with 100-metre sides, hectare is used in the measurement of land across the world. Although not a unit of SI, hectare is the only named unit of area that is accepted for use with SI units. The International Committee for Weights and Measures has classified hectare as a 'non-SI unit accepted for use with the international system of units'.Among the geographies where this land measurement unit is most commonly used are Australia, Burma, Canada, the European Union, India, the US, the UK, etc.The hectare has its exact equivalent in Argentina by the name manzana, in China by the name gong qing, in Iran by the name jerib, in the Netherlands by the name bunder and in Turkey by the name djerib. Different units of measurement of the area of land are used in different parts of the globe. For instance, an acre is known as the statute measure that is applicable in nations like the U.S.A and the U.K. In India, land measurement varies significantly from one state to another. Some of the standard land measures that are used in India states include acres, hectares, square yards, and square meters. Bigha is a conventional unit of measurement of the area of land that is used in numerous Indian states such as Uttar Pradesh, Madhya Pradesh, West Bengal, Punjab, and Rajasthan. It is important to understand the computation of Hectare to Bigha in Uttar Pradesh, as it can be immensely helpful, especially in the agricultural context. Definition of Hectare
A "hectare" can be defined as the unit of area in the metric system that is equal to 10,000 square meters or 100 acres. It is one of the most commonly used metric units of land measurement. The unit hectare is used as a substitute for an imperial acre. One acre is approximately 0.405 hectare, and one hectare comprises of around 2.27 acres. In the agricultural context, the hectare unit is considered to be extremely valuable as it helps to understand crop production and agricultural output in a better manner. In the agricultural setting of India, there is a need to understand how to convert Hectare to bigha in UP as farmers widely use the latter unit. How to calculate 1 Hectare to Bigha in UP
Hectare to Bigha in Up Hectare to Bigha converter is an superb online area conversion calculator that is popularly used to convert from Hectare to Bigha in land measurement. Therefore, 1 Hectare is equal to three decimal point eight seven Bigha in Uttar Pradesh (UP). In mathematical expression, 1 Hectare = 6.1772 Bigha. Convert Hectare to Bigha in Uttar Pradesh
"Bigha" is a conventional term that is used for agricultural land measurements in many Indian states like Uttar Pradesh and Assam. The value of Bigha varies from one state to another. But generally, 1 Bigha falls in the range of 1/3 to 1 acre. In other words, 1 Bigha is equivalent to almost 1/8th to 2/5th hectare. This land measurement is used by farmers in various Indian states so that the calculations relating to the area of land can be simplified. In fact, farmers need to know how to convert 1 hectare in bigha so that uniformity can be maintained while measuring the area of land. Biswa or Katha is the sub-unit of Bigha. In the Assam state, the value of 1 Hectare (ha) is equivalent to 7.47493055555556 Bigha. In other words, it can be said that one Bigha in Assam is the same as 0.3305785 acres. But this calculation does not mean that the ascertained value is the same for 1 bigha in UP as well. In the Assam state, the value of one bigha is 14,400 square feet. This area can be further divided into 5 Katha. A single Katha comprises 20 Lessa, which covers a total of 144 square feet in area. Thus, it can be stated that a single Katha is nothing but 2,880 square feet area. This figure might vary to a certain extent in different parts of the state. In Uttar Pradesh, the value of one bigha is approximately 20 biswa, which is equivalent to around 27,000 square feet. Since the value of a single Hectare in the state is approximately 2.27 acres, the value of 1 hectare is equal to 6.1772 bighas. The value of one bigha is not consistent throughout the state. For instance, in the western districts of UP, the value of a single bigha is either the same as five biswa, where one biswa is 125 square meters or 6.75 biswa. In other parts of Uttar Pradesh, 1 bigha can be divided into 20 biswa where the value of each biswa is 125 m2 or 154.32 yd2. In the eastern region of UP, the value of one Bigha is equal to 20 Biswa (pakka) and 10 Biswa (kaccha). Such a calculation has not been made official but it is used in the local setting for the calculation of the area of land. In order to make the calculation in a simple way, an option is to use appropriate area converter software. In other words, one bigha might mean different things to varying individuals. For example, in the western region of Uttar Pradesh, the value of one bigha is equal to 5 biswa, 625 square meters, 6750 square feet or 771.60 square yards. The value of one Bigha in eastern districts of Uttar Pradesh is equal to 20 Biswa (Pakka) or 10 Biswa (Kaccha). In the other districts of UP, the value of one bigha is equal to 20 biswa. For the proper computation of bigha in the state, it is necessary to have a thorough knowledge of various other measures of the area of lands such as the hectare, biswa and square meters and square yards. Since the value of bigha varies significantly in different districts of Uttar Pradesh, the calculation of Bigha in UP can be done by referring to land measurement formula pdf. The proper knowledge of formula can simplify the computation of the measurement of the area of land. In simpler language, it can be said that in the UP state of India, the computation of 1 bigha comes to 20 biswa which is approximately 27,000 square feet. Bigha is a widespread unit of measurement that is used in Uttar Pradesh and various other states of India. It has a vital link with other units of measurement of the area of land, such as acre. An acre is around 1.56 times larger than the value of Bigha in Uttar Pradesh. The computation of bigha into other units of the area of land might get complex as there exists a wide range of units of measurement. Thus, one of the simples and convenient options is to use unit converters that are available on the online platform. Such tools can help to capture the exact value of bigha in Uttar Pradesh and other parts of India with a high level of accuracy. Why Is Everyone Talking About 1 Hectare To Bigha? The hectare is an SI unit of area equal to 100 ares. The unit hectares (ha) is primarily used in the measurement of land as a metric replacement for the imperial acre. An acre is about 0.405 hectare and one hectare contains about 2.47 acres. Bigha is also a unit of measurement of land area varying locally from 1/3 to 1 acre ( 1/8 to 2/5 hectare). Easily convert Hectares (hectares) to Bigha I (bigha) using this free online unit conversion calculator. 1 Hectare to Bigha in Rajasthan This is the Currect Answer is 1 Hectare is equal to 3.95 Bigha in Rajasthan.
