How much does 1 million pennies weigh

Image: enviromantic / Life On White / Gianluca Fabrizio / E+ / Stockbyte / Getty Images Imagine you are holding a kitten. Its paws are stretching toward your neck, while it buries its cold nose into your shirt. It cutely mews as you adjust yourself, revealing the young cat's disheveled fur. The small animal has yet to learn to properly groom itself, which explains its unkempt appearance. This isn't a unique experience — most people have held a kitten. Now, based on that, how would you respond if someone asked you to pick up the kitten in paperclips? How many would you grab? Can you fathom how many of the tiny metal items are needed to match the weight of the kitten you were just holding? While it may seem strange to evaluate the weight of an item on whether it weighs more than a kitten or not, that's exactly what this quiz asks you to do! For the purposes of this quiz, we'll be assuming the average weight of a 6-month-old kitten is 5 pounds, but, of course, this weight will vary by the breed. Will you be able to tell if an item weighs more or less than a sweet young feline of 5 pounds? It's time to test your knowledge! Will you come out on top or crumble under the weight? Our award-winning website offers reliable, easy-to-understand explanations about how the world works. From fun quizzes that bring joy to your day, to compelling photography and fascinating lists, HowStuffWorks Play offers something for everyone. Sometimes we explain how stuff works, other times, we ask you, but we're always exploring in the name of fun! Because learning is fun, so stick with us! Playing quizzes is free! We send trivia questions and personality tests every week to your inbox. By clicking "Sign Up" you are agreeing to our privacy policy and confirming that you are 13 years old or over. Copyright © 2021 InfoSpace Holdings, LLC, a System1 Company It's the 4th of July and you'll be out and lovin' on America and hot dogs here shortly, but before you do take a few seconds and read this awesome essay (?) I stumbled upon while looking for pics the other day for Rockstar Finance... I usually don't read the descriptions of them when scanning Flickr, but for some reason I decided to on this one and was pleasantly surprised when I did :) Maybe you'll enjoy it too? It's called "The Penny" from a guy named Louis, and looks to be one entry of the 365 days he was snapping pics. Who knew Flickr could be so inspirational! "The Penny" I saw this penny, created in 1977, two years before I was born and the year my wife was born. It made me think about what kind of journey its been on, how many hands had held it, etc. It was a fascinating thought. It had probably been with people that had much and with people that had very little. One thing I realized however is that no one owns that penny. It's had several users, but no owner, including myself. Someday, it will move on again. Currency is meant to be active, to move and that is a secret to wealth. So often we think about acquiring money, so that we can survive, pay the bills, get out of debt, etc. but I could give this penny away and set it in motion and more would come. I've seen this happen several times and it is an awesome process! One of my favorite verses is: "Give and it will come back to you, pressed down, shaken together and running over" (Luke 6:38).I have been practicing that by faith and wow, its been an incredible experience! It's just a penny? no, not at all. I know people who can take a penny and make millions. I've known people who have done it. A penny is something, it's a start. What I do with it is what determines what I receive as a result of that action. The journey of a thousand miles begins with one single step. The journey to prosperity and financial freedom starts with one penny. Most people see a penny and think about lack. I look at this penny and think about prosperity. My hope is that this penny will be a blessing to someone else and add much to another life. :) Happy birthday, America! Here's to (Financial) Independence! — Refreshing words (and photo) by Louis - a piano teacher, photographer, writer, and life coach according to Flickr. He can also be found on his blogs @ louiscollins.blogspot.com and amomentinfashion.blogspot.com. Thanks for sharing it, man! Jay loves talking about money, collecting coins, blasting hip-hop, and hanging out with his three beautiful boys. You can check out all of his online projects at jmoney.biz. Thanks for reading the blog! The leatherback sea turtle, the largest turtle on Earth, can weigh up to 2,000 pounds, or 1 ton. Leatherbacks are the only sea turtles to have a leathery, rather than bony, carapace. One ton is equal to 2,000 pounds. Also known as the short ton, the ton is the standard unit of measure used in the United States. There are many different animate and inanimate objects that weigh 1 ton, a fraction of 1 ton or a multiple of 1 ton. The giraffe, the tallest animals on Earth, can weigh more than 1 ton. The giraffe can run as fast as 35 miles an hour and has spots that help camouflage it amongst the trees on the African savanna. The MK-54 bomb is a 2,000-pound, unguided bomb that can be dropped from military aircraft to destroy a target on the ground. When the Joint Direct Attack Munition guidance kit is attached to this 1-ton bomb, it is considered a guided bomb. The brown bear and the polar bear each can weigh as much as 1 ton. The saltwater crocodile, a dangerous reptile that is responsible for as many as 30 attacks on humans each year, can weigh 1 ton or more. The Royal Mint states that the British penny weighs 3.56 grams. The penny was first issued on Feb. 15, 1971. It was one of three new coins that were introduced after a new decimal currency system was implemented by the United Kingdom. The other coins that were introduced because of the new decimal currency system were the 1/2 penny and two penny coins. All of the coins featured the word "new" incorporated into their reverse designs to help avoid confusion between the old and new coins. The word was finally removed in 1982. After 1992, one penny coins were struck in copper-plated steel instead of bronze because of the increasing price of metal. Honey weighs half again as much as an equal volume of water, according to Convert-To.com. For example, 1 pint of water weighs 16 ounces, but 1 pint of honey weighs 24 ounces. This is an average metric, but the true weight of honey by volume may vary depending on how much water is present in the honey being used. Bee Craft notes that honey that contains more than 20 percent water by volume is at risk of fermentation. Honey kept in improperly sealed jars may absorb water from the atmosphere, lowering the honey's density slightly and leaving it at risk for fermentation. To prevent this, it is important to store honey in tightly sealed containers in a cool, dry place.
